RE: UIC Permit (**Antelope Creek Enhanced Oil Recovery Project**)

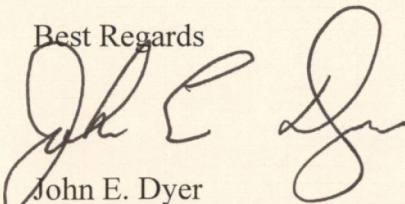

Dear Mr. Williams:

Attached please find the original copy of our Underground Injection Control permit to be submitted to your section of the Environmental Protection Agency. As we have discussed in other conversations the issuance of the draft permit is necessary for the implementation of the **Antelope Creek Enhanced Oil Recovery Project** that is proposed by Petroglyph Operating Company and Inland Resources Inc. This project will be similar to several other projects that are currently underway in the area where enhanced oil recovery techniques are being applied to the Green River Formation of the Uinta Basin.

This project will be the first of its kind on the Ute Indian Reservation and as I mentioned earlier we have signed an agreement with the Ute Indian Tribe to effectively unitize the Antelope Creek Field for the purposes of Enhanced Oil Recovery. The Tribe has informed us that they are eager to see us get underway and your help with expediting the permitting process would be most appreciated by Inland, Petroglyph and the Ute Tribe.

Your help in the early formation of the permit was most appreciated and will ultimately help us get to the draft permit more quickly. During your review process if you should need any assistance with additional data please do not hesitate to call me at (292-0900).

Best Regards

  
John E. Dyer  
Vice-President
